

MICHELE VALINOTI

PhD Candidate in Economics

✉ michele.valinoti@nyu.edu ☎ 646-301-6782 📍 New York, USA
🌐 [LinkedIn](#) 🐙 [GitHub](#) 🌐 michelevalinoti.github.io

Economics PhD candidate with expertise in causal inference, machine learning/AI, and NLP. Skilled at applying advanced methods to diverse domains and eager to leverage new technologies to solve real-world problems.

PROFESSIONAL EXPERIENCE

Uber | San Francisco, CA (USA)

PhD Scientist Intern (Membership Team) Jun – Aug 2025

- **Model Deployment:** Deployed and refined a membership model by building SQL ingestion pipelines, scaling estimation in PySpark, and delivering automated reporting for stakeholders.

New York University | New York, NY (USA)

Graduate Researcher and Teaching Assistant 2020 – Present

- **Large-scale Data Analysis:** Assembled and structured large novel datasets and applied econometric techniques, including panel regressions, difference-in-differences.
- **Structural Estimation:** Developed structural models of intermediation and spatial competition.
- **Natural Language Processing:** Fine-tuned sentence transformers to measure gendered variation in content, style, and topics across 1M+ political news articles.
- **Large Language Models:** Developed scalable LLM pipelines for 100K+ municipal ordinances, and handwritten historical records, integrating batch APIs, prompt engineering, and fine-tuning.
- **Teaching:** Served as teaching assistant for undergraduate, master's, and PhD-level courses; supported instruction, designed assignments, and coordinated teamwork activities.
- **Writing and Communication:** Wrote 4 research papers, and presented research in internal seminars to academic audiences.

Graduate Research Assistant 2022 – 2025 (part-time)

- **Causal Inference:** Replicated regression discontinuity (RDD) studies to validate a discontinuity-detection algorithm.
- **Geospatial Analysis:** Constructed terrain slope datasets for US counties and assisted in first-stage instrumental variable strategy.
- **Model Optimization and Simulation:** Optimized Julia/Python solvers to compute market equilibria and estimate structural parameters; implemented parallelized bootstrap simulations at large scale.
- **Statistics:** Assisted in the statistical theory and implementation of bounding the extent of selection bias in a structural model.

European Central Bank | Frankfurt, Germany

Risk Analyst Intern Jan – Jul 2020

- **Risk Monitoring:** Ran daily and weekly monitoring tasks, identified potential flags, and communicated with stakeholders at national central banks.

EDUCATION

PhD and MPhil, Economics 2026 (anticipated)

New York University, USA

MA, Economics 2019

Collegio Carlo Alberto, Italy

BSc, Physics | MSc, Stochastics and Data Science 2019

University of Turin, Italy

SKILLS

Coding: Python (*pandas, scikit-learn, PyTorch, Hugging Face*), Julia, R, SQL

Tools: Git, ~~W~~TeX, PySpark

Languages: English (fluent), Italian (native)
